A History of Optics from Greek Antiquity to the Modern Era

The history of optics is a fascinating journey through centuries of scientific inquiry, philosophical speculation, and technological innovation. From the earliest observations of light and vision in ancient Greece to the sophisticated optical instruments of today, this field has profoundly influenced our understanding of the natural world and our ability to manipulate light for various purposes. This article traces the development of optics from its origins in Greek antiquity through the medieval period, the Renaissance, the Enlightenment, and into the modern scientific era, culminating in the advances that have led to contemporary optical technologies.

Early Foundations of Optics in Greek Antiquity

The Pre-Socratic and Classical Philosophers

- Thales of Miletus (circa 624?546 BCE): Often regarded as one of the first to consider the nature of light, Thales proposed that everything is full of gods and that light travels from the eyes to objects, an early idea of vision as a form of emission theory.
