- **Halogens (Group 17):** Highly reactive nonmetals like chlorine and fluorine.
- **Noble Gases (Group 18):** Inert gases such as helium, neon, and argon.

Periodic Trends

Several properties of elements show predictable trends across the periodic table:

- **Atomic Radius:** Increases down a group and decreases across a period.
- **Electronegativity:** Decreases down a group and increases across a period.
- **Ionization Energy:** The energy required to remove an electron; increases across a period and decreases down a group.
- **Electron Affinity:** The tendency to gain electrons; varies similarly to electronegativity.

Interconnection of Atoms, Subatomic Particles, and the Periodic Table

How Subatomic Particles Determine Element Properties
