- Questions ranged from straightforward recall to complex application and data analysis.

The IB Bio Markscheme for November 2013

Purpose and Importance of the Markscheme

The markscheme serves several key purposes:

- Provides detailed criteria for awarding marks based on the quality of student responses.
- Ensures consistency and fairness in grading across different examiners.
- Guides students on how to structure their answers to meet assessment standards.

Structure of the Markscheme

The markscheme is typically organized question by question, with specific points outlined for each part of the question. Points can include:

- Key concepts or facts students should mention.
- Procedural steps or experimental design elements.
- Application of biological principles.
- Evaluation or interpretation of data.

Each point is associated with a certain number of marks, and examiners award marks based on the completeness, accuracy, and clarity of the responses.

Sample Marking Criteria

For example, a typical question on enzyme activity might have the following criteria:

- Identification of the enzyme involved (1 mark).
- Explanation of how temperature affects enzyme activity (2 marks).
- Use of specific data from a given graph to support the explanation (2 marks).
- Critical evaluation of experimental design limitations (1 mark).

Based on this, students can see that detailed, precise answers are rewarded, and vague responses will receive fewer marks.

Analyzing Specific Questions from the 2013 November Paper

Sample Question 1: Cell Structure and Function

Question: Describe the structure of the cell membrane and explain its role in active transport.

Markscheme Highlights:

- Description of phospholipid bilayer structure (hydrophilic heads, hydrophobic tails) ? 2 marks.
- Mention of membrane proteins (channel, carrier proteins) ? 1 mark.
- Explanation of the fluid mosaic model ? 1 mark.
- Role in active transport: protein carriers, ATP requirement, movement against concentration gradient ? 3 marks.

Ideal Student Response:

A comprehensive answer would include details about the phospholipid bilayer's structure, the presence of integral and peripheral proteins, and how these components facilitate functions such as active transport, which involves specific carrier proteins powered by ATP to move substances against their concentration gradient.

Sample Question 2: Data Analysis

Question: Given a graph showing enzyme activity at different temperatures, interpret the data and explain the trend.

Markscheme Highlights:

- Identification of the temperature at which enzyme activity peaks ? 1 mark.
- Explanation of the effect of increasing temperature on enzyme structure and function ? 2 marks.
- Explanation of enzyme denaturation at high temperatures ? 2 marks.

- Reference to the data points to support explanations ? 2 marks.

Ideal Student Response:

A detailed answer would note that enzyme activity increases with temperature up to an optimum (e.g., 37°C), then declines sharply due to denaturation. It would explain that higher temperatures cause the enzyme's tertiary structure to change, reducing substrate binding efficiency and leading to decreased activity.
