The Kedah Protocol of Obstetrics and Gynaecology (Kedah Protocol) was developed by a consortium of Malaysian obstetricians and gynaecologists in response to the need for a regionally tailored clinical guideline. Its primary goal is to harmonize clinical practices across healthcare facilities in Kedah, ensuring optimal outcomes for mothers and infants through standardized management pathways.

The protocol integrates the latest evidence-based medicine, local epidemiological data, and resource considerations specific to Kedah, Malaysia. It covers a broad spectrum of obstetric and gynaecological conditions, from antenatal care to postpartum management, as well as gynecological disorders and surgical interventions.

## Core Components of the Kedah Protocol

The protocol is meticulously structured into several core sections, each addressing a crucial aspect of obstetric and gynaecological care. These sections include antenatal management, intrapartum care, postpartum protocols, gynecological diagnosis and treatment, and surgical guidelines.

### - Antenatal Care (ANC)

Objectives:

- Early detection of pregnancy complications
- Monitoring fetal growth and maternal health
- Providing health education and screening

Key Features:

- First Trimester Assessment: Emphasis on early booking, baseline investigations (blood group, Rh status, anemia screening), and risk factor identification such as hypertension, diabetes, and infectious diseases.
- Risk Stratification: Using a standardized scoring system to categorize women into low, moderate, or high risk, guiding the frequency of follow-up and interventions.
- Ultrasound Screening: Recommended at 11-14 weeks for nuchal translucency and early anomaly scan, with subsequent scans at 20 weeks for detailed fetal anatomy.
- Screening Tests: Integrated screening for Down syndrome, gestational diabetes mellitus (GDM), and infections.

**Innovations:**

- Incorporation of local epidemiological data, such as higher prevalence rates of certain infections like hepatitis B, influencing targeted screening.
