Common causes include herniated discs, spondylosis, or foraminal stenosis.

Cervical Spinal Cord Syndromes

Damage to the cervical spinal cord can produce:

- **Quadriparesis or quadriplegia:** Weakness or paralysis affecting all four limbs.
- **Sensory deficits:** Loss of sensation below the level of injury.

It often results from cervical spondylosis.

Cervical Dystonia (Spasmodic Torticollis)

A focal dystonia characterized by involuntary contractions of neck muscles, leading to abnormal head postures and movements.

Clinical Features and Diagnosis

Understanding the clinical presentation is crucial for diagnosing movement impairment syndromes accurately.

History and Physical Examination

Key points include:

- Onset and progression of symptoms
