Assessment and Initial Evaluation

Effective management begins with a thorough assessment. The test bank emphasizes:

- Detailed history including mechanism of injury, time of injury, and environmental factors.
- Physical examination focusing on burn depth (superficial, partial-thickness, full-thickness), size (TBSA - Total Body Surface Area), and location.
- Identification of associated injuries or complications such as inhalation injury or fractures.

Key points for primary care providers:

- Use of age-appropriate assessment tools.
- Recognizing signs of inhalation injury (e.g., soot in nostrils, singed facial hair).
- Estimation of burn size using Lund-Browder chart versus Rule of Nines, noting that pediatric charts differ from adult.

Classification and Severity Assessment

Understanding burn severity guides management decisions:

- Superficial (1st degree): Involves only epidermis; erythema, pain.
- Partial-thickness (2nd degree): Extends into dermis; blistering, moist appearance.
- Full-thickness (3rd degree): Extends into subcutaneous tissue; leathery, insensate.

The test bank emphasizes correlating clinical findings with appropriate classification, critical for prognosis and treatment planning.

Initial Emergency Management

Key steps include:

- Ensure safety: Remove the child from the source.
- Stop the burning process: Cool the burn with running water.
- Assess airway, breathing, circulation (ABCs): Especially in facial or chest burns.
- Pain control: Use age-appropriate analgesics.
