1. The Goal of Financial Management: Maximizing Shareholder Wealth

At the heart of managerial finance lies the objective of maximizing shareholder wealth. This goal aligns the interests of management with those of the owners, emphasizing the importance of making decisions that increase the stock price and overall company value.

2. The Time Value of Money (TVM)

One of the foundational principles is recognizing that money has a different value today than it will in the future. This concept influences investment appraisal, capital budgeting, and financing decisions.

- **Future Value (FV):** The amount a current investment will grow to over time at a specified interest rate.
- **Discount Rate:** The rate used to convert future cash flows to their present value, reflecting risk and opportunity cost.

3. Risk and Return Tradeoff

Effective financial management involves balancing risk and return. Higher potential returns typically come with increased risk, and understanding this tradeoff is vital for making informed decisions.
