His vital signs remain stable, and there are no signs of infection or other complications. He has a history of hypertension and type 2 diabetes, both of which are well-managed.

Sample Response:

Dear Dr. Johnson,

Re: Mrs. Jane Smith, aged 65

I am writing to refer Mrs. Jane Smith, who has been under my care for the management of her diabetic foot ulcer. Mrs. Smith has a 10-day history of a painful ulcer on the plantar surface of her right foot. She has a known history of poorly controlled type 2 diabetes mellitus and peripheral neuropathy.

On examination, the ulcer measures approximately 2 cm in diameter, with surrounding erythema and mild swelling. The wound bed appears yellowish, indicating possible infection. Her vital signs are stable; however, her recent blood glucose readings have been consistently elevated, averaging 15 mmol/L.

In the past week, I have been dressing the wound with saline-soaked gauze and advising strict foot care. Antibiotics have not been initiated yet, pending assessment. She reports some increased pain and difficulty walking.

Given the severity of the ulcer and risk of progression, I recommend a specialist assessment for possible debridement and further vascular evaluation. Please advise on the next steps for management.

Sample OET Letter to a Community Nurse

Below is a detailed sample letter to guide you in your OET preparation:

Dear Nurse Johnson,

I am Dr. Emily Carter, a general practitioner at Sunnyvale Medical Clinic. I am writing to inform you about Mr. John Smith, a 65-year-old patient under my care, who requires ongoing wound management following recent surgery.

Mr. Smith underwent a minor skin excision on his left forearm two weeks ago for basal cell carcinoma. The wound has been healing well; however, I have noticed early signs of infection, including increased redness, swelling, and mild purulent discharge. His temperature has been slightly elevated over the past two days.

I would appreciate your assistance in monitoring and caring for his wound during this critical healing phase. Please ensure the wound is cleaned regularly, and advise on appropriate dressing changes. Mr. Smith is also prescribed antibiotics? Amoxicillin 500mg three times daily for the next seven days. Kindly monitor for any adverse reactions.

Additionally, please assess his overall health, especially his blood glucose levels, as poorly controlled diabetes can impede wound healing. He is known to have type 2 diabetes, currently managed with metformin.

Please inform me if there are any concerns or if further interventions are needed. I recommend a follow-up appointment in one week to evaluate wound progress.

Thank you for your support in managing Mr. Smith's recovery. Feel free to contact me at (555) 123-4567 if additional information is required.

Yours sincerely,

Dr. Emily Carter

He reports that his blood sugar levels have been fluctuating more frequently despite adherence to his current medication regimen.

Mr. Doe has a history of poorly controlled diabetes, with recent HbA1c levels at 8.5%. His blood pressure readings have averaged 150/90 mmHg. He reports occasional episodes of dizziness, especially when standing up quickly, and feelings of tiredness that interfere with his daily activities.
