Understanding York Centrifugal Chillers

What is a Centrifugal Chiller?

A centrifugal chiller is a type of refrigeration machine that uses a centrifugal compressor to cool large buildings, industrial processes, or data centers. Unlike screw or scroll chillers, centrifugal chillers rely on high-speed rotating impellers to compress refrigerant, which is then condensed, expanded, and evaporated to produce cooling.

Key features of centrifugal chillers include:

- High efficiency, especially at full load
- Large capacity range, typically from 150 to over 1,000 tons
- Smooth, quiet operation due to rotating components
- Advanced control systems for optimized performance

Why York Centrifugal Chillers Are Industry Leaders
