Understanding the Circulatory System

Before diving into specific arteries and veins, it is essential to understand the basic components of the circulatory system:

- Heart: The muscular organ that pumps blood throughout the body.
- Arteries: Blood vessels that carry oxygen-rich blood away from the heart to tissues.
- Veins: Blood vessels that carry deoxygenated blood back to the heart.
- Capillaries: Tiny vessels where exchange of gases, nutrients, and waste occurs between blood and tissues.

The entire system functions as a closed loop, ensuring continuous circulation that sustains life.

Major Arteries of the Human Body

Arteries are thick-walled vessels designed to withstand high pressure from the heart's pumping action. They branch into smaller arteries and eventually into capillaries. The major arteries branch directly from the heart and supply blood to significant regions of the body.

The aorta is the largest artery in the body and serves as the main conduit for oxygenated blood leaving the heart.

- **Ascending Aorta:** rises from the left ventricle of the heart.
- **Aortic Arch:** curves over the heart, giving rise to major arteries supplying the head and arms.
- **Descending Aorta:** extends downward through the chest and abdomen, supplying the thoracic and abdominal organs.

Branches of the Aorta:

- Brachiocephalic trunk (in some individuals): supplies the right arm and head.
- Common carotid arteries: supply the head and neck.
- Subclavian arteries: supply the arms.
- Celiac trunk: supplies the stomach, liver, spleen, and other abdominal organs.
- Renal arteries: supply the kidneys.
- Iliac arteries: supply the pelvis and legs.

2. Common Carotid Arteries

These arteries run along each side of the neck and supply blood to the brain, face, and neck.

A large vein that collects blood from the upper body, including the head, neck, arms, and chest, and drains into the right atrium of the heart.

Major tributaries include:

- Brachiocephalic veins (right and left): formed by the union of internal jugular and subclavian veins.
- Internal jugular veins: drain blood from the brain and face.
- Subclavian veins: drain blood from the arms.

2. Inferior Vena Cava

The largest vein in the body, returning blood from the lower limbs, pelvis, and abdomen.

Major tributaries include:

- Common iliac veins: from the pelvis and legs.
- Renal veins: from the kidneys.
- Hepatic veins: drain blood from the liver.

3. Jugular Veins

Drain blood from the brain, face, and neck.

- Internal jugular veins: primary drainage for the brain.
- External jugular veins: drain superficial parts of the face and scalp.

4. Subclavian Veins

Drain blood from the arms and shoulders, joining with the internal jugular vein to form the brachiocephalic vein.
